OpenSuse

(Tumbleweed / Leap 15.x)

Default Apps

```
zypper in terminator yakuake pcmanfm
```

Power Management

https://doc.opensuse.org/documentation/leap/tuning/html/book-tuning/cha-tuning-power.html

https://wiki.archlinux.org/title/CPU_frequency_scaling

Sublime

```
sudo rpm -v --import https://download.sublimetext.com/sublimehq-rpm-pub.gpg
sudo zypper addrepo -g -f
https://download.sublimetext.com/rpm/stable/x86_64/sublime-text.repo
sudo zypper install sublime-text
```

Cockpit

```
zypper in cockpit
systemctl enable --now cockpit.socket
# Open the firewall if necessary:
firewall-cmd --permanent --zone=public --add-service=cockpit
firewall-cmd --reload
```

Ruby

```
sudo zypper in rbenv rbenv-bash-completion rbenv-bundle-exec

echo 'eval "$(rbenv init - bash)"' >> ~/.bashrc
# restart konsole
#or
rbenv init

## Install latest ruby version
## not recommended to use system ruby because then rbenv doesn't set GEMPATH
etc.
```

```
rbenv install $(rbenv install -l | grep -v - | tail -1)
rbenv global $(rbenv install -l | grep -v - | tail -1)

## Install bundler
gem install bundler
```
